**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Klepeis (US 5,073,033). Klepeis ('033) discloses an impeller having a central hub and first and second blades extending from the hub each having a planar portion and a generally triangular tip portion (12,14) which meet at an angle along first and second lines which do not pass through the centerline of the said central axis.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 3-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Klepeis (US 5,073,033). Klepeis ('033) discloses an impeller having a central hub and first and second blades extending from the hub each having a planar portion and a tip portion (12,14) which meet at an angle along first and second lines. A method of mixing the material using the impeller is also disclosed (see col. 1, lines 5-9). The exact angle values of the instant claims are not expressly disclosed. However, Klepeis ('033)

Art Unit: 1723

teaches in col. 3, lines 24-29, that depending upon the material to be mixed the angle of the tip portions may be optimized.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
